

# AGIQ COMPRESSOR WALL

## PRODUCT HIGHLIGHTS

- 1 **4-9 COMPRESSOR MODULES** - This offers the highest level of both temperature and humidity control, with the added benefit of redundancy.
- 2 **COMPRESSOR MODULES** - Each module is packaged with an evaporator coil, heat exchanger and 2-stage compressor which can be replaced quickly without any refrigerant work.
- 3 **FLUID COOLERS** - This solves the traditional condenser challenges of AC control, oil migration, low ambient operation, and line length limits.
- 4 **SMART CONTROLLER** - Can operate the unit without any network connection, or in the case of a network failure. When connected, the controller can be accessed remotely via Grow Sentry.
- 5 **GROW SENTRY** - Allows you to view your unit performance from anywhere with a web-based app that tracks your room, allows remote changes to be made, and alerts you in the case of a potential problem.
- 6 **100% HOT GAS REHEAT** - This application requires 60-70% reheat, which AGronomic IQ accomplishes entirely with hot gas reheat. Alternatives like electric or gas heat can incur large operational costs.
- 7 **FAN ARRAY** - We use multiple variable speed fans for partial or full redundancy to efficiently deliver the right amount of air.
- 8 **INDUSTRY LEADING STANDARD WARRANTY** - 2-year on parts, and 1-year on labor for all components.
- 9 **HIGH EER** - With EER values as high as 14.3, our units are as efficient as commercial grow equipment come.
- 10 **NON-CONCURRENT ELECTRIC REHEAT** - Having 100% hot gas reheat available means no need for running the electric heat with the compressors. This reduces energy usage, electrical service requirements, electrical gear, and install costs.
